

## What hurts hospital energy efficiency?

Be more powerful with less energy

### Symptoms

One hospital bed uses 29,000 kWh heat and 6,000 kWh electricity per year, as much as two new family homes.

Hospitals account for 4% of energy use in USA

25% of a hospital's operating cost is energy related

### Diagnosis

10%

Metering reduces energy use up to 10%, by tracking users' consumption habits.

Frequent data collection and metering = 14.6% lower cost intensity

### Treatment

\$1 saved in energy costs is equivalent to generating \$20 of new revenue

An efficient infrastructure improves your margin by 25%

A design-phase partnership builds better hospitals faster

### Prevention

5%

Redesign of energy systems can boost bottomline by 5%

Reduce energy 30% with Ecostruxure™

7,800

tons of carbon emissions prevented each year by redesigned systems
